

Talking to **PARENTS** about vaccines

Children ages 5-11 are now able to receive the COVID-19 vaccine. Vaccinating children helps keep them safe as well as others around them – especially older adults, younger children and infants, and those with illnesses. These resources and tips can help address **parents'** fears and foster vaccine confidence among children and parents alike.

“
Is it safe for children to get vaccinated?”

START BY SAYING...

I can tell you want what's best for your child.

While most children who get COVID-19 have a minor illness, a small number get very sick.

While COVID-19 vaccines were developed quickly, all steps have been taken to ensure their safety and effectiveness.

KEEP IN MIND

Pregnant people are encouraged to get the COVID-19 vaccine. The vaccine is safe for pregnant people, and there is no evidence that the COVID-19 vaccine can cause fertility problems.

COVID-19 vaccines are safe and effective for children ages 5-11. COVID-19 vaccines are effective and can lower your risk of getting and spreading the virus that causes COVID-19.

Vaccinating children keeps the whole family safer. COVID-19 vaccines help prevent serious illness and death in children and adults even if they do get COVID-19.
